

Are you facing challenges categorizing and extracting patient and clinical information from faxes, PDFs, images, and scans?

Despite today's technology, a trail of digitized paper records still follows patients as they move through the modern healthcare system. Thus, healthcare systems demand efficient information management and process automation for digitizing, ingesting, classifying, and extracting health data to optimize results while ensuring data security.

It is time to make the right information available at the right time for caregivers

Patient Relevant Information

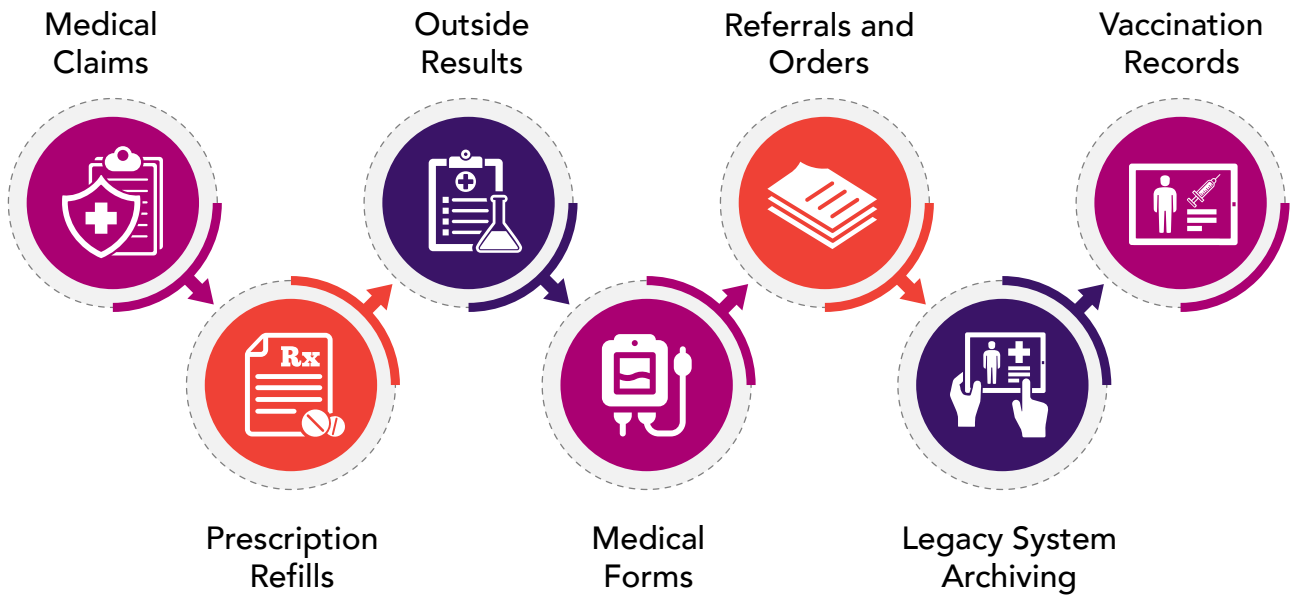

The Ultimate Document Capture & Intelligent Processing Solution

Uses state-of-the-art public cloud artificial intelligence and machine learning to recognize & extract information from documents, faxes and narrative reports which adds value as more documents get processed.

Product features/ specifications

- Ingests document images from faxes and scans automatically
- Categorizes the document (lab result, medication refill etc.)
- Extracts relevant patient information from document images (patient name, DOB, MRN etc.)
- Matches patient information to the EHR using FHIR API or HL7

Some of the document types we support...

Benefits

By automating manual processes of healthcare-related documents, you can

- Avoid unintentional errors
- Increase efficiency
- Streamline workflow & provide faster results to improve patient experience
- Save time and money
