Healthcare Triangle's DevOps Managed Services Helped a Top Life Sciences Company Scale to a Global Market

The Client

The customer is a forward-thinking oncology company leading the charge against cancer with next-generation medications and treatments.

Powered by bi-coastal centers of discovery and development excellence, the life sciences customer is rapidly evolving their product portfolio to target an expanding range of tumor types and indications with their clinically differentiated pipeline of small molecules, antibody drug conjugates and other biotherapeutics.

The Challenge

The life sciences customer needed a partner to help them break through the boundaries holding back their cloud footprint from reaching its full potential.

With manual AWS accounts and little automation, scaling up seemed impossible—they needed a guide with DevOps experience to lead them down the path towards success.

By employing strong practices such as standardization and streamlining operations through automation, they looked for cloud DevOps expertise who could build out their enterprise platform sustainably so that business growth would no longer be hindered by infrastructure constraints.

The Work

Healthcare Triangle's expertise and experience with Cloud DevOps Managed Services has been a major draw for the life sciences customer looking to capitalize on the efficiency, agility, and cost savings of cloud solutions.

HCTI provided the customer not only with a secure solution that meets their current demands but also enables meaningful future growth.
By offering HITRUST certified DevOps managed services tailored specifically to the customer's needs, Healthcare Triangle is poised at the forefront of transforming how they run their businesses in an increasingly digital world.

The customer harnessed the power of HCTI's DevOps capabilities to reach higher levels of efficiency and success.

HCTI has seen significant traction in this market as life sciences companies move to the cloud to improve efficiency and agility, while reducing costs.
HCTI's solution not only addressed the customer's current needs but also provided a roadmap for their future growth.

Results

HCTI's skilled DevOps managed services team helped the life sciences customer:

- Adopt a DevOps approach and move forward

- Maximize efficiency

- Drive innovation

- Streamline business processes

- Standardize their global cloud footprint
